

**Your business will become an e-business.  
Be prepared for the challenges.**

**e-business is more than a storefront. It's a business.**

It's no longer enough to merely bolt-on or integrate your front office with your back office environment. In e-business, you have to organize the complex relationships among your customers, suppliers and inventory over the web - the clicks - for maximum efficiency and responsiveness. Every element of planning, operations, manufacturing and financials - the bricks - should be managed within the context of the entire supply chain. And you should plan, track and manage the end-to-end results of every supply chain decision for e-business optimization. *e-intelliprise™* will empower your business by providing the back to front office integration.

***e-intelliprise* is the bricks behind the clicks.**

**e-business is global business.**

Once you take your business over the Internet - it's a global business. Global businesses have unique challenges - language, currency, taxation, business policies. *e-intelliprise* maximizes the Internet by personally addressing all of these issues.

***e-intelliprise* is the bricks behind the clicks.**

**e-business rules can change in an Internet minute.**

Time to market equals money. What works for one company may not work for you. What works for one customer may not work for another. So it's critical to be able to change business rules that drive operations, schedules and management. Change them immediately, on-the-fly, without technical constraints or outside consultants. Who knows what the future of the Internet will bring - taxation, migration of all your business units to e-business, target marketing.

With *e-intelliprise*, you'll be ready.

***e-intelliprise* is the bricks behind the clicks.**

▶ *Turn your e-vision into business value today and tomorrow*

▶ *Deliver the power of information how and when you need it*

▶ *Combine your traditional and e-business channels into a single infrastructure*

▶ *Create "market of one", reach your audience in their own terms*

- Activity Workflow Manager

## *e-intelligence* delivers end-to-end support

### The power of information delivered how you need it, and when you need it

As your e-business develops, you'll want to reach out to traditional business partners, consumers and employees to better meet their unique information needs. *e-intelligence* dynamically develops target web pages, creating a market-of-one. And web page content can be dynamically changed by user via business policy tables – without technical constraints and costly custom programming. *e-intelligence* goes one step further in supporting all e-business models with its ability to deploy these business views over the Internet, intranets or extranets – simultaneously from a single solution. **The ultimate in flexibility.**

### Future Internet expansion supported by agile architecture

At the heart of *e-intelligence*, an agile architecture provides the depth and flexibility to support e-business relationships. Today and tomorrow. This open, multidimensional model makes it easy to align business processes with corporate imperatives – without custom programming. This means *e-intelligence* can adapt to new organizational structures created by mergers, acquisitions, re-engineering efforts or evolving trading partner and supply chain initiatives. And it does it **at the speed of e-business.**

### Traditional and e-business channels combined by technical infrastructure

As you continue to capitalize on the web for greater business value, it will become more and more apparent that your company needs an all-inclusive solution to meet both your front and back office needs. If you began operations as an e-business entity ("clicks") or as a traditional business ("bricks"), without an end-to-end e-business solution, your trading partners may soon view your enterprise as disorganized and hard to do business with. The farther down the Internet adoption road you go, the more you'll need a complete one-source infrastructure to empower your e-business vision. American Software provides that infrastructure with *e-intelligence*. In fact, you can consider us as **the bricks behind the clicks.**

## to create the enterprise without walls

### global e-business enhanced with market-of-one focus

Deploying *e-intelliprise* over the web automatically expands your marketplace to service customers around the globe.

And with the ability to dynamically support a market-of-one – multiple currencies and languages – and determine different business policies and rules on a trading partner-by-trading partner basis, you have the power to **break down international communication barriers.**

### Advanced Business Intelligence driven by alerts

What's the most important asset that your company owns? Information – details about your trading partners, products, financials, marketplace strategies that worked or didn't. Can *your* company leverage this information to become more responsive and agile in running your business?

The ready-to-use business intelligence of *e-intelliprise* alerts you to operational efficiencies or deficiencies via the Internet or wireless communication devices. This way, you can gain competitive advantage by responding more effectively to business critical obstacles and opportunities as they occur. There's more. The cornerstone of *e-intelliprise* business intelligence features pre-loaded data marts with industry standard metrics such as Generally Accepted Accounting Principles (GAAP) and the Supply Chain Operations Reference Model (SCOR). This gives you an immediate framework for business intelligence. Not only that, the alerts, data marts and metrics can be customized to meet every individual's needs within your supply chain. Ultimately, as the bricks behind the clicks, *e-intelliprise* gives you the power of information and infrastructure to **create the enterprise without walls.**
